### Considering The Solution Process

For a solution, this point is called the saturation point and the solution itself is called a saturated solution. At the point of saturation, no more solute will dissolve in the solvent. Rather the process of dissolving and precipitation are both occurring simultaneously and at the same rate.

### The Solution Process

The formation of a solution is an example of a spontaneous process, a process that occurs under specified conditions without the requirement of energy from some external source. Sometimes we stir a mixture to speed up the dissolution process, but this is not necessary; a homogeneous solution would form if we waited long enough.

Why does the solution process usually lead to an increase in disorder of molecules? when a solute is added to a solvent, one is adding a compound to a pure liquid in most cases. The addition of this second compound causes the amount of disorder to increase as the particles are now more randomly arranged.
